

The flow of requests between specialists in a developing organization is steadily increasing. With the requests volume increase, the load on the specialists responsible for notifying each interested specialist increases as well. Sending notifications in manual mode takes a lot of time. To optimise the notification process, a Notification Builder has been developed to automate the preparation and sending of notifications.

This constructor allows you to create and send notifications in an automated mode.

THE MODULE CAN BE USED TO CONFIGURE MAILING LISTS OF THE FOLLOWING TYPES OF MESSAGES

SYSTEM PUSH-NOTIFICATIONS

Allows you to organize informing users about certain events in the system;

E-MAIL MESSAGES

Allows you to inform users by e-mail;

SMS MESSAGES TO MOBILE PHONES

Allows you to organize informing users about certain events in the system using SMS messages.

THE MAIN BLOCKS OF FEATURES PROVIDED BY THE NOTIFICATION CONSTRUCTOR:

- CONFIGURING MAIL MESSAGES;
- CONFIGURING NOTIFICATION TEMPLATES;
- CONFIGURING NOTIFICATION ACTIONS.
